

HP600 Hand Pump

For easy and efficient off-grid filling

Sometimes, a power source just isn't readily available, and you have to do things the old-fashioned way. If you don't have the proper equipment, this can cause even menial tasks to become exhausting and inefficient. Like pumping. Luckily, there's the HP600.

The HP600 hand pump is the ideal LPG pump for projects in remote areas without power supply, and an effective backup for electric pumps. With its double action, it delivers 1 litre every three strokes at differential pressures over 5 bar. An extended 1 meter lever allows for easier pumping, and the pump's all steel construction makes it durable and stable.

Whether you are filling forklift trucks, boats or leisure vehicles, the HP600 gets the job done, and done well.

Specifications

- All steel construction
- Hydrostatic protection
- Nitrile piston, O-rings and shaft seal
- 300 millilitre capacity per stroke (double acting)
- 3/4" NPT female horizontal inlet port
- 3/4" NPT male vertical outlet for direct shear valve fitting
- Hydraulically tested to 37 bar
- Meets PED requirements
- Bolts directly to the tank leg using the optional bed-plate for maximum stability
- Made in the UK
